I hereby certify that this paper or fee is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 CFR 1.10 on the date indicated above and is addressed to the Assistant Commissioner for Patents, Washington, D.C. 20231.

Docket No.: GR 97 P 3757

  
MICHAEL BURNS

Date: April 3, 2000

Hon. Commissioner of Patents and Trademarks  
Washington, D.C. 20231

Sir:

Enclosed herewith are the necessary papers for filing the following application for Letters Patent:

Applicant : KARL WAEDT

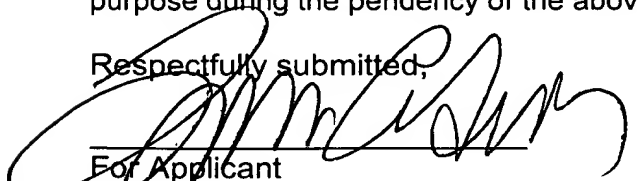

Title : RESPONSIVE SYSTEM FOR DIGITAL SIGNAL PROCESSING  
AND METHOD FOR OPERATION OF A RESPONSIVE SYSTEM

1 sheet of formal drawings in triplicate.  
A check in the amount of \$690.00 covering the filing fee.  
Information Disclosure Statement and 4 References.  
PCT Publication (cover sheet only).

This application is being filed without a signed oath or declaration under the provisions of 37 CFR 1.53(d). Applicants await notification of the date by which the oath or declaration and the surcharge are due, pursuant to this rule.

The Patent and Trademark Office is hereby given authority to charge Deposit Account No. 12-1099 of Lerner and Greenberg, P.A. for any fees due or deficiencies of payments made for any purpose during the pendency of the above-identified application.

Respectfully submitted,

  
For Applicant

(54) Title: RESPONSIVE SYSTEM FOR PROCESSING DIGITAL SIGNALS AND OPERATING METHOD FOR A RESPONSIVE SYSTEM

(54) Bezeichnung: RESPONSIVES SYSTEM ZUR DIGITALEN SIGNALVERARBEITUNG SOWIE VERFAHREN ZUM BETRIEB EINES RESPONSIVEN SYSTEMS

(57) Abstract

The invention seeks to make a responsive system particularly fail-safe, even in the case of frequent revision. To this end, computer programmes (SW) which depend on the respective update status are implemented in data processing units (2A to 2Z) which intercommunicate via a data transmission unit (4). At each communication, each data processing unit (2A to 2Z) assigns a revision characteristic (R) to the signal (S) it produces, characterizing that signal's update status. A data processing unit (2A to 2Z) receiving the signal (S) carries out a comparison in order to determine whether the revision characteristic (R) characterizing the signal (S) corresponds to a revision characteristic (R) stored for this signal (S). If such is the case, the signal (S) is processed.
